

One Platform to Unify, Protect, and Control Documents

Egnyte for AEC

AEC firms require reliable solutions that accelerate project delivery and enable remote work, even in locations without connectivity or access points – all while maintaining document control and protecting sensitive information from falling into the wrong hands. The Egnyte platform tackles data challenges by employing a unified solution to handle the demanding needs of a highly collaborative yet distributed workforce leveraging numerous systems. Essential functions include:

- **Streamlines Business Practices with A Centralized File Repository:** A single platform for accessing and collaborating on documents of various file types is the best way to ensure companywide and project stakeholder visibility.
- **Consolidates Data and Documents Across Industry Applications:** A critical part of any project's success is integrating data from multiple software tools into one unified platform, ensuring everyone is on the same page regarding the project's progress.
- **Provides Remote Team File Access and Upload:** Quick and easy access to project files from remote project locations often requires hybrid solutions – a combination of on-premises and cloud-based project file storage. With a hybrid solution, team members can store, access, and work on project files locally in areas of low connectivity and sync in-process files back to the master project folder in the cloud once they regain connectivity.

Architects

Spend more time on designing and less on administrative tasks.
Streamline design collaboration across internal and external partners.

Engineers

Manage dense data sets and calculations, including high-res imagery, for seamless collaboration with stakeholders.

General Contractors

Avoid rework and delays by syncing and securing critical project files across your offices and jobsites.

Specialty Contractors

Eliminate the dependency on offline copies so your entire project team can always work off the latest version in real-time.

PROJECT CONTROL

FEATURE	DESCRIPTION
Project Folders	Designate specific folders as a project, assign status (active, closed, etc.) and start and end dates.
Project Lifecycle Management	Revoke permissions and sever links to project content for anyone no longer requiring access and initiate any predefined content retention, archival, and deletion management policies.
Smart Upload	Upload photos directly to the relevant project folder based on geo-location, keeping them organized and making them easily accessible.
Project Templates	Create new projects using a predefined folder structure and permissions set.
Project Homepage	Empowers project managers by providing instant access to critical files and visibility into project activity.
Procore Advanced Integration	Support for additional data flows between Egnyte and Procore with near real-time continuous sync.

SPECIALIZED FILE HANDLER

FEATURE	DESCRIPTION
Revit/Civil 3D SMB on Smart Cache	Work concurrently with multiple users on a model at the same time without overwriting or version issues.
BIM File Preview	Preview (including rotate, zoom, orbit and measure) native industry file formats, including CAD, without the need for specialized software.
BIM File Preview on Mobile	Preview (including rotate, zoom, orbit and measure) native industry file formats, including CAD, from your mobile device.
BIM File Search	Search on and within Revit, Navisworks, and CAD files and not just on the file names.
360 Image Support on Mobile	Easily view, pan, and zoom 360-degree images on your mobile device.

Egnyte is the most secure multi-cloud platform for content security and governance that enables organizations to better protect and collaborate on their most valuable content. Established in 2007, Egnyte has democratized cloud content security for more than 17,000 organizations, helping customers improve data security, maintain compliance, prevent and detect ransomware threats, and boost employee productivity on any app, any cloud, anywhere. For more information, visit www.egnyte.com.
