

Document Room

Introduction

Egnyte Document Room is a single, secure repository for sensitive data that employs AI-powered capabilities to easily manage, find, and utilize unstructured content and information within an organization's content, while preserving data confidentiality. Companies maintain control of their sensitive data through an invitation-only, stand-alone domain with granular folder permissioning. The domain also restricts user access to, and how users interact with, specific files. Auditing is made easy with pre-defined reports to track user activity and stakeholder permissions, folder activities, and user governance.

Why Egnyte

Egnyte Document Room is purpose built for controlling sensitive information.

It provides:

Enhanced Sharing Controls

Restrict who can access, download, comment, and re-share content on a fine-grained basis

Enhanced Analytics

Visibility into who and how often content is accessed, on a per-room basis

Purpose-Built User Experience

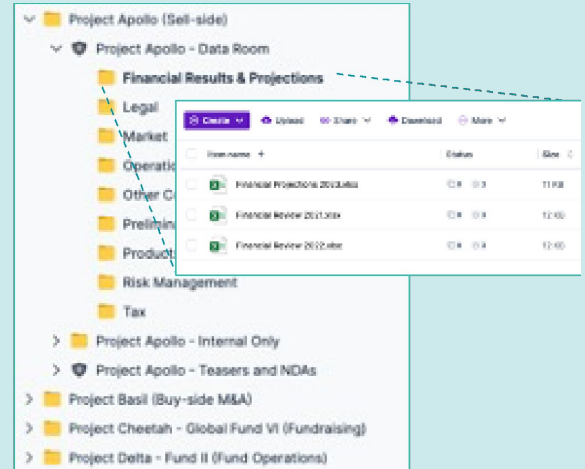

Simple, straightforward portal for external user access, including anonymity controls

Enhanced Content Management

Content indexing, permission change notifications, permission templates, and deal archival

AI-Powered Content Insight

Auto-summarization of documents, chat-based search and synthesis, and document labels and metadata

Common Uses

Mergers, Acquisitions and Divestitures

Share content during due diligence

Capital Markets

Manage the lifecycle of financing deals

Board Reporting

Easily deliver sensitive content to board members

Research, Manufacturing & Alliances

Control and share Intellectual Property (IP)

Fundraising

Invite investors and gauge their interest

Strategic Partnerships

Due diligence for acquisitions and subcontractors

Personally Identifiable Information (PII) and HIPAA

Protect the privacy of your employees, partners, clients, and patients

The Egnyte Solution

Egnyte offers a comprehensive solution to improve productivity with enhanced collaboration. It strengthens security by reducing the risk of unintended release of sensitive content and provides simplified access and activity management and reporting.
